A; Introns: 8/2; 32/3; 64/3; 96/3; 140/3
C; Function: 8/2; 32/3; 64/3; 96/3; 140/3
C; Function: probably involved in protein transport from the endoplasmic recommendation: probably involved in protein; translation elongation factor Tu how c; Superfamily: ras transforming protein; translation elongation factor Tu homology <ETU>
C; Keywords: endoplasmic reticulum; Golgi apparatus; GTP binding; lipoprotein tein
F; 127/Domain: translation elongation factor Tu homology <ETU>
F; 18-25/Region: nucleotide-binding motif A (P-loop)
F; 62-67/Region: nucleotide-binding motif B
F; 124-127/Region: GTP-binding MKXD motif F; 154-127/Region: GTP-binding MKXD motif F; 154-156/Region: GTP-binding SAK/L motif
F; 134, 25, 43, 124, 125, 127, 154/Binding site: Mg-GTP (Lys, Ser, Thr, Asn, Lys, Asf; 194/Binding site: phosphate (Ser) (covalent) (by cdc2 kinase) #status predicted
F; 204, 205/Binding site: geranyl-geranyl (Cys) (covalent) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A;Title: The ras related ypt
